

Ternak Padel — Complete Guide (Admin & Players)

How the app works, and how to use **every** feature — for superadmins, hosts, and players. For URLs, credentials and infrastructure, see `DOCUMENTATION.md`.

- App: <https://ternakpadel.xyz>
- Admin console: <https://ternakpadel.xyz/admin>

Part A — How it works (the big picture)

```
Player → Google sign-in → profile created → joins an event → pays (Xendit)
      → payment confirmed (webhook) → on match day the HOST runs the event
      → each finished match triggers the "win cascade":
          points + rank + streak + badges + a feed post, pushed live to every phone.
ADMIN watches and manages all of it from /admin.
```

Key ideas:

- **One identity:** players sign in with Google. No passwords. Their Google name seeds their profile.
- **Roles:** *Player* (everyone) → *Host* (`is_host` , or whoever created an event) → *Superadmin* (`is_admin`). Higher roles add powers; they don't replace the player experience.
- **Source of truth is the database (Supabase).** The app and the admin console are just views onto it; payments are confirmed by Xendit, not by hand.
- **Realtime:** scores, rosters and the feed update on every device instantly — no refresh needed.
- **Nothing resets:** stats accumulate across a season; badges are permanent.

Part B — Player guide (members), end to end

B1. Sign up / sign in

1. Open <https://ternakpadel.xyz>.
2. Tap **Continue with Google** and choose your account.
3. Answer four quick questions — **skill level, preferred side, how often you play, what you're here for**. (You can **Skip** any.)
4. You land on your welcome card with your first badge, **Rookie** → tap **Find your first match**.

B2. Home tab

- **Match-day hero:** your next/live event up top. If you've joined and it's today, you can **Check in** here.
- **Community feed:** match results, rank changes, new badges, join notices, and **admin announcements** (🔴). Tap the heart to **like** a post.

B3. Events tab

1. Browse upcoming tournaments (Americano, Mexicano, League, King of the Hill, Knockout, Mixicano).
2. Tap an event to open its **detail**: format, venue, date/time, fee, who's in.
3. Tap **Join** → you're sent to a secure **Xendit** payment page.

4. Pay with **QRIS / OVO / DANA / ShopeePay / bank VA**.
5. You're redirected back — "**Payment received — you're in!**" — and your name appears on the roster. (Until you pay, you're not on the roster.)

B4. Match day & the Matches tab 🔍

- **Check in** (Home hero or when prompted) so the host knows you're there.
- When the event is **live**, the **Matches** tab shows your **court**, your partners/opponents, and the live score.
- **Scorer mode**: open your live court to add/subtract points; the score syncs to everyone in realtime.
- When a match ends you'll see the result animation — points, rank change and a share card.

B5. Rankings tab 🏆

- The **season leaderboard**. Your row is highlighted. Rank is by total points; points come from playing (everyone) and winning (more).

B6. Profile tab 👤

- **Career**: rank, win rate, matches, streak, points, a rank-history sparkline.
- **Badges**: earned vs locked (Rookie, First Match, Iron Player, Undefeated, Champion...).
- **Timeline**: your match results and badges over time.
- **Share**: generate a share card of a result or your stats.

B7. Create your own event (any player) ➕

1. Tap the + (center of the tab bar).
2. Set **name, format, courts, max players, date** → **Create**.
3. Registration opens immediately and **you are its host** (see Part C).

B8. Settings ⚙️

- **Theme** (dark/light), **accent color**, **type pairing**, **density** — saved to your device.
- **Replay onboarding** (re-do the intro), and **Open host console** if you're a host with a live event.

Part C — Host guide (running a live event)

A host is the event's creator, or anyone with `is_host = true`. Best run on a tablet at courtside.

C1. Before the event

- Create the event (Part B7) or have it created for you.
- Players register and pay; watch the roster fill.

C2. Start it live

The event must be set to **live** (an admin can flip this in `/admin → Events → Status`, or in Supabase). Round-1 matches are created (host flow / admin), and play begins.

C3. In the Host Console (Settings ⚙️ → Open host console)

- **Score every court** at once.
- **End round** → the app auto-generates the next round's **pairings** (Americano logic: rank-balanced groups of four) and pushes them to all phones.
- Manage **resting** players and **check-ins**; see **live standings**.

- **End match** runs the **win cascade**: winners get event points + 2, losers get 2; streaks update; ranks are snapshotted; badges are awarded; a result is posted to the feed — all live.
-

Part D — Admin / Superadmin guide (the /admin console)

D0. Access

1. You must be a superadmin (`is_admin = true`). To enable the very first admin, run `supabase/migrations/0004_rebuild.sql` (or the `update ... is_admin grant`) in the Supabase SQL editor — see `DOCUMENTATION.md §5` .
2. Open <https://ternakpadel.xyz/admin> → **Continue with Google** with your admin account.
3. If it says **Not authorized**, your account isn't flagged yet (or sign out/in to refresh).

The console is enforced by server-side security (RLS): a non-admin can't read payments or change data even outside the UI.

Layout: left sidebar = tabs; top-right =  **Refresh**; bottom-left = your name,  **Back to app**, and **Sign out**.

D1. Overview

Six live metrics at a glance:

- **Members** — total registered players.
- **Revenue (paid)** — sum of all confirmed payments.
- **Pending payments** — invoices created but not yet paid.
- **Active events** — events that are `open` or `live` .
- **Live matches** — matches currently in play.
- **Feed posts** — total community posts.

D2. Members

Table of every player: avatar, **name**, **username**, **city**, **skill**, **joined date**, and two switches:

- **Host** — turn on to let them run live events (Host Console).
- **Admin** — turn on to make them a **full superadmin** (same powers as you, including this console).

Create another admin: the person signs in once at the app (so a profile exists) → here, flip their **Admin** switch on. To revoke, flip it off.

D3. Payments

Every payment, newest first. Columns: **date**, **player**, **event**, **amount**, **method**, **status**, **invoice link**. Filter chips: **all** / **paid** / **pending** / **expired** / **failed**.

- Status colors: paid (green), pending (amber), expired (grey), failed (red).
- **Open** ↗ jumps to that Xendit invoice.
- Read-only on purpose — payment status is owned by Xendit's webhook, so the numbers are always trustworthy. (To reconcile a stuck payment, check Xendit.)

D4. Events

- **Create event** (top card): title, type, date/time, venue, fee (Rp), courts, max players → **Create**. It opens for registration immediately.

- **Events table:** title, type, when, venue, fee, **Paid/Max** (paid roster vs capacity), and a **Status** dropdown.
- **Change status** with the dropdown:
 - open — registration open
 - live — **starts the event** (players see live courts)
 - done — finished/archived
 - cancelled — hidden from players

D5. Matches 🔍

Read-only view of all matches: **event, round, court, team A, team B, score, status** (live in green). Use it to monitor play across every court/event.

D6. Content 📢

- **Post announcement:** type a message → **Publish**. It appears in every player's **Home feed** with a 📢 icon, labeled "Pengumuman".
- Below: the latest posts (date, author, kind, text) so you can see what's live.

D7. Everyday admin tasks

Task	Where
Make someone a host	Members → Host switch
Make someone an admin	Members → Admin switch
Start an event	Events → Status → live
Cancel an event	Events → Status → cancelled
Announce news	Content → Publish
Check revenue / pending	Overview / Payments
Investigate a payment	Payments → Open ↗ (Xendit)
Refresh the data	top-right 🔄

For deeper operations (season rollover, schema, deploys), see `DOCUMENTATION.md §6`.

Part E — FAQ / troubleshooting

- **"Not authorized" at /admin** → your Google account isn't `is_admin`. Grant it (Members switch from another admin, or the SQL grant), then reload.
- **A player paid but isn't on the roster** → confirm Xendit fired the webhook (Payments shows `pending` if not). Status is webhook-driven.
- **Announcement didn't show** → it posts to the feed (Home tab); pull to refresh.
- **Login loops / blank after Google** → Supabase Auth → URL config must list `https://ternakpadel.xyz/**` (see `DOCUMENTATION.md §4`).
- **Stats look empty** → make sure a season exists and is current (Supabase `seasons.is_current = true`).
